

A possible parameter configuration for LCGT 10-30kg TM payload (EM130411)

Flexibility & Constraints

- 1) PAY total mass =300 kg (F4+IM+IMR+TM+RM)
- 2) Similar slopes for pitch/roll/yaw TFs passing from TM10 to TM30
- 3) Only one more series of 4 holes in IM (for TM wires)
- 4) IMR slightly heavier by adding (small as 5 kg) weights
- 5) IM slightly heavier by adding (small as 5 kg) weights
- 6) Change of RM and of TM with their wires (other wires OK)

General aim = smallest impact in transition TM10->TM30

Provided that the values implemented in the model might be slightly approximated, here I list the basic shapes of the bodies involved in the transition 10->30 Kg (MKS):

TM10	=>	RM90	=>	IMR36	=>	IM80
d = 0.1		d = 0.2		d=T.B.D.		d=T.B.D.
r = 0.25/2		rext = 0.283		r= T.B.D.		r= T.B.D.
		rint =25/2+0.02*2				
Ixx= 0.051		Ixx= 0.93		Ixx=1.6		Ixx=1.2
Iyy= Ixx		Iyy= Ixx		Iyy=3.2		Iyy=1.4
Izz= 0.084		Izz= 1.86		Izz=1.6		Izz=1.2
TM30	=>	RM60	=>	IMR41	=>	IM85
d=0.14		d = 0.2		d=T.B.D.		d=T.B.D.
r = 0.35/2		rext = 0.283		r= T.B.D.		r= T.B.D.
		rint =35/2+0.02*2				
Ixx= 0.275		Ixx= 0.96		Ixx=2.24		Ixx=1.272
Iyy= Ixx		Iyy= Ixx		Iyy=4.48		Iyy=2.544
Izz= 0.14		Izz= 1.92		Izz=2.24		Izz=1.272

Mechanical design feasibility to be checked.
